

944 Turbo Brake Callpers (Identical Parts of 928 S 4)

The brake piston scraper rings, used previously on the four piston brake callpers (Brembo make) for front and rear wheels, are replaced with special dust caps. Function is improved with help of these changes.

- Reduction of piston displacement force.
- Less piston and cylinder wear.
- Reduction of residual friction after application of brakes.

For these reasons it is **Important to make sure that only brake callpers of the same type are installed on one axle for repairs.**

Old Version:
 Dust cap sealed off the piston surface by sliding on it.
 Can be recognized on the steel insert (arrow) of the seal.

- 1 Dust cap
- 2 Silencer
- 3 Rubber seal (right-angle ring)
- 4 Groove in caliper housing with "knock-back-chamfer"
- 5 Brake caliper housing
- 6 Piston
